WORK EXPERIENCE

Game Developer

Vertigo Games | Istanbul, Turkey — March 2026 - Present

- Develop and ship gameplay features for a live mobile FPS with 200M+ downloads, built in Unity with real-time multiplayer on Photon and Photon Fusion.
- Implement core combat systems including weapon behavior and game modes, handling latency, client-side prediction and state synchronization to keep networked combat responsive and fair.
- Profile and optimize networked gameplay code under real match conditions, reducing CPU spikes and GC pressure across the huge device spread of a global player base.
- Debug and fix live gameplay issues surfaced by a massive player base, tracking exceptions and logs through Sentry and shipping fixes without disrupting the live service.
- Build features with an AI-driven workflow, using agentic coding tools (Claude Code, Cursor, GitHub Copilot) for implementation, debugging and code review.
- Shipped: Critical Strike CS: Online FPS, Polygun Arena: Online Shooter.

Senior Game Developer

NARCADE | Istanbul, Turkey — August 2022 - December 2025

- Owned core gameplay mechanics for multiple Unity mobile puzzle games (Match-3, Find the Object), designing and shipping features from concept to live release with the design team.
- Created and balanced 30+ gameplay items and boosters, tuning mechanics, visual feedback and usability to support puzzle variety and long-term player progression.
- Optimized mobile performance across draw calls, GC allocations and memory usage, holding a stable 60 FPS down to low-end 2GB RAM Android devices.
- Built custom Unity editor tools and content pipelines, including level editors, cutting level creation time from hours to minutes for the design and QA teams.
- Mentored junior developers and ran code reviews across the gameplay team, establishing shared architecture and coding standards.
- Shipped: Zen Master, Garden & Home, Royal Decor, Friends Adventure Match, Match 3D Box, Triple Farm, Match Land.

Game Developer

Yolo Game Studio | Istanbul, Turkey — March 2022 - August 2022

- Prototyped 10+ hyper-casual and puzzle game concepts in Unity on 5-10 day iteration cycles to evaluate gameplay clarity, player engagement and CPI performance.
- Integrated analytics and ad SDKs (Firebase, GameAnalytics, Adjust, AdMob, Unity Ads) to support data-driven iteration.
- Shipped: The Last Truck, Last Man Standing, City Builder, Cube Arena, Rotate Puzzle.

Game Developer

Star Hunter Games | Istanbul, Turkey — September 2021 - February 2022

- Implemented core gameplay mechanics and loops using Unity physics, animation and mobile input systems, from concept to Google Play release.
- Shipped: Bunker Rush 3D, Ramboat Loot, Mom Simulator 3D.

SKILLS

Engine & Languages: Unity3D, C#, .NET

AI-Driven Development: Claude Code, Cursor, GitHub Copilot, Agentic Coding Workflows, AI-Assisted Debugging

Multiplayer & Networking: Photon, Photon Fusion, PlayFab, Client-Side Prediction, State Synchronization

Libraries & Tools: DOTween, UniTask, R3 (UniRx), Zenject, Odin Inspector, Addressables, ScriptableObjects, Unity Profiler, Git

Architecture: SOLID Principles, Event-Driven Systems, Dependency Injection, Design Patterns

Mobile Production: Performance Optimization, Memory & GC Optimization, Crash & Error Monitoring (Sentry), iOS & Android Build Pipelines, LiveOps, CPI Prototyping, Agile/Scrum

Monetization & Analytics: AdMob, Unity Ads, Firebase, GameAnalytics, Adjust

EDUCATION

Bachelor of Science in Computer Engineering (English)

University of Karabük — 2020
